# eco-tents.com

*Destination Villages, Daniels Head Resort, Bermuda. Deluxe interior appointments include: draped fabric ceiling, overhead fan, fabric wall coverings, roll-up curtains, standard electrical outlets and switches, as well as conventional doors and windows.*

Eide Industries offers design, specification and engineering for Eco-Tent applications worldwide. Eco-Tent systems are adaptable to most environmental needs and requirements. System design considerations include the following:

- Geographic location
- Site orientation
- Wind, snow and seismic loads
- Available resources
- Ecological responsibilities
- Budget considerations
- Shipping and delivery methods
- Assembly time, tools and personnel

Frames are designed and engineered to meet the requirements of each customer and project. The Eco-Tent framework shown here is anodized aluminum and designed for 110 m.p.h. wind loads. Walls and components are prefabricated to reduce assembly and installation costs.

**Eco-Tents are custom made in optional configurations and are available with renewable energy and sustainable resource packages.**

### Contact Us

Our specialists will assist you with preliminary design specifications, size and configuration options, material selections and budget information. Eide will also work with you to define the Eco-Tent system and provide you with a comprehensive pricing proposal.
